

Tariff breakdown

Grange Farm

Insite Energy work on behalf of your heat provider, Harrow Council, to provide metering and billing services to you. Below is an explanation of your heat tariff calculations. The rates applied by your heat supplier are solely determined to recover all the costs incurred through operating a heat network, and your heat supplier does not profit from the operation of the heat network.

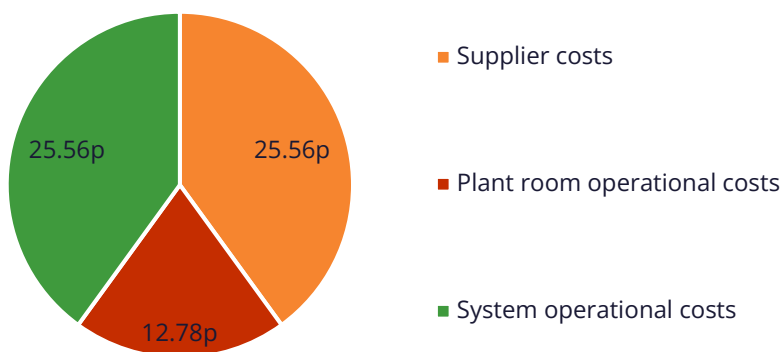

The wholesale energy price cap

The Energy Bill Discount Scheme (EBDS) will be replacing the Energy Bill Relief Scheme (EBRS); both of which have been put in place by the Government to provide support for organisations during the energy crisis. The EBDS will be in place from 1st April 2023 until 31st March 2024. During this time, all businesses can benefit from a discount on their wholesale gas & electricity bills.

We are currently waiting on further information on EBDS discount, and if it is applicable to the Grange Farm development, from your heat provider, Harrow Council.

Your unit charge breakdown

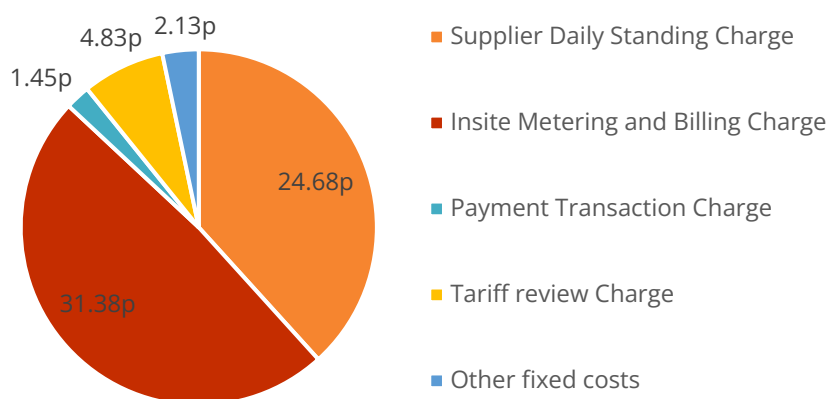

63.89 p/kwh

The average operational costs for a heat network equates to 56% of the unit charge breakdown.

Your daily standing charge breakdown

64.46 p/day

⚠ Please note, your heat supplier does not profit from the operation of your heat network

Standard components of your heat tariff

Your **unit charge** covers the bulk cost of the energy generated in the communal plant room. It also includes any associated heat losses between the supply point and your home. Your energy consumption is measured via the heat meter installed in your home, so you only pay for what you have used. You are charged for every kilowatt-hour (kWh) consumed within your property.

Your **daily standing charge** is the fixed charge passed on by your heat provider, which covers the cost of operating the heat network and delivering energy to your home. This is an annual fixed amount that is payable every day by all residents regardless of how much energy they use.

Depending on your heat provider, the costs associated with running and maintaining the heat network will either be included within your building service charge or your heating and hot water daily standing charge.
